

## The River Alt Project: Creation of a new river channel in a linear park

The River Alt is currently part-culverted at Stonebridge, Croxteth, Liverpool. A £1.5M project is creating a new river channel, 900m in length, which will open up the culverted section and create a linear park adjacent to the new river channel. The initial engineering phase commenced in February 2014 and will be completed in June.

A landscape contractor will be planting riverside riparian vegetation and sowing wet meadows after the engineering works have been completed. Ecological Restoration Consultants Limited is the appointed ecological advisor to the River Alt project.
